## What chart is best for day trading

Veteran's Day is an important observance in the United States, set aside for honoring and remembering men and women who have served in the armed forces. Speeches for Veteran's Day are common, but these five facts about Veteran's Day will give you fascinating historical facts about the holiday.Armistice DayVeteran's Day was originally known as Armistice Day, and it was first established on November 11, 1919. Armistice Day was a legal holiday designed to honor the end of World War I, which happened on November 11, 1918. In 1938, Congress passed legislation to officially make November 11 Armistice Day, designed to honor World War I veterans.The Switch to Veteran's DayAs the wars continued with World War II and the Korean War, Congress was urged to amend the original act of 1938 to make the holiday include more veterans than just the World War I veterans. On June 1, 1954, Armistice Day became Veteran's Day, designed to honor all American veterans. President Dwight D. Eisenhower signed this legislation into law.Changing the MonthCongress moved Veteran's Day to the fourth Monday of October in 1968 as a way to give federal employees another three-day weekend. At this time, there was disagreement among some states, and some states chose not to move the holiday. Thus, for several years, some states observed Veteran's Day in October while others kept it on the original November date. The Final ChangeIt wasn't until 1975 when President Gerald Ford signed a bill to return Veteran's Day to its original date of November 11. In 1978, Veteran's Day officially returned to November, and it's been there ever since. Officially, if Veteran's Day falls on a weekend, federal government employees get a day off on the Friday or Monday that is closest to the date. Banks are closed on Veteran's Day or the nearest Friday or Monday as well.Veteran's Day Ceremonies and CelebrationsAt 11 a.m. on Veteran's Day, a wreath-laying ceremony happens at the Tomb of the Unknown Soldier in Arlington National Cemetery. The President of the United States takes part in this ceremony, placing the wreath on the tomb after a color guard advances and the national anthem plays. After laying the wreath, taps is played as a poignant reminder of the ultimate sacrifice given by veterans.The first parade to occur on Veteran's Day happened in Birmingham, Alabama, in 1947. This parade is still an annual tradition in Birmingham. Many local communities also find ways to honor veterans on Veteran's Day with outreaches such as free breakfasts, ceremonies, concerts and resource fairs for veterans. MORE FROM QUESTIONSANSWERED.NET New traders tend to test every possible time frame and often choose a time frame for the wrong reason. But there is a simple concept to choose the right time frame for day trading to make the right decision right from the beginning.What Is a Time Frame?When people talk about a time frame in day trading, it's all about the time-based chart interval. All major trading platforms offer time frames like the daily, weekly, monthly, or even yearly charts. But those time frames have only limited benefits for day traders. As a day trader, you need intraday time frames to time your entries and exits. The intraday time frames allow you to enter trades with an excellent risk-reward ratio.Swing-traders frequently use the 60-Minute time frame, but there is also the potential for profitable day-trades by combining this chart interval with a lower chart interval utilizing multi-time-frame analysis. One thing to keep in mind, the regular trading hours are from 9:30 a.m. to 4:00 p.m., and the first candle starts at 9:30. Therefore, the last 60-minute candle of a day only contains data of the last 30 minutes of the regular trading hours session from 3:30 p.m. to 4:00 p.m.15-Minute Time FrameThe 15-minute time frame is probably the most popular interval for day traders focusing on multiple stocks throughout the day. The longer the watchlist, the higher the chart interval should be. You need to have a realistic chance to scan and analyze the current market behavior. If the chosen time frame is too low, and too many stock symbols are screened at a time, the chances of missing the best possible entries increases.5 Minute Time FrameHigh volatile stocks move fast, and traders who focus on only a couple of stocks a day use the 5-minute time frame frequently. The 5-minute chart is especially helpful in the first 60 minutes of a trading day. The time per candle is long enough to analyze the stock and to prepare the orders. 1-Minute Time FrameTrading in short-term time frames such as the 1-minute chart requires discipline and an excellent understanding of the market structure. You need to know what you are looking for. For example if a highly volatile stock breaks the previous day high with high momentum, chances increase that the next higher low in the 1-minute time frame allows you to open a trade with low risk and high potential.Multi-Time Frame AnalysisTrading against the primary trend is a big trap that new traders fall into. Often, the higher time frames are not considered at all. The right way is to work from the highest time frame to the lower one to spot entries with a high profit potential. If the current price is above the previous day high, above the 60-minute opening range, and with higher lows and higher highs all over the place, the sentiment is bullish. Shorting such stocks is against the trend, and the chances are that a short squeeze will lead right to the next high. The higher time frames determine the trend, and it is the most profitable approach to trade with the trend until it's broken.Things To ConsiderSlippageSlippage is the difference between the fill price you were looking for and the price you got. The slippage increases if the spread gets wider and when trading high volume in less active markets. Limit orders can be used to reduce the slippage, but a limit order has the downside that there is no guarantee that the order will be filled.Choosing the right charting time frame is important. The lower the time frame, the longer the screentime. The longer the screentime and higher the trading frequency, the greater the chances of making mistakes. That's why it is essential to choose the charting time frame based on your time and trade frequency preferences.Higher time frames like 60-minute or 15-minute charts have the benefit that they can be traded from a mobile device with less time commitment. Time frames like the 1-minute chart should only be considered for trading systems or hotkey trading. Want to take control of your trading? The best way to do so is to arm yourself with the right tools. One of the best tools for traders or investors is stock charts. With stock charts you can analyze price action, locate the best levels to trade off, see trends and much more. However, charting software can be really expensive so we went ahead and researched all the best free stock charts just for you! Want to learn more? Keep reading! What are stock charts? Stock charts are a visual representations of a stocks price action based on time and price. Along the x-axis is time which tells you at what time the trades went off and along the y-axis you have prices which tells what prices were traded. You can add a ton of different indicators to your charts including volume, moving averages, stochastics or Bollinger bands to name a few. This is a price chart showing stock prices and other important information such as stock symbol, price change, and net change. The data is plotted over a time frame, for instance, day, week or month. There are three main types of charts. You have: Line chart - used to plot the closing price of a stock Bar chart - tracks 3 to 4 price points Candle and stick chart (most popular) - uses 4 types of price data to provide investors with accurate information of the price action How to read stock charts Learning how to read a stock charts is important. If you are going to trade stocks, they can seem a little overwhelming at first but once you get the hang of them it's really easy to understand. The first step is to familiarize yourself with the interface. When you open a stock chart for a specific company such as Google, a bunch of information is displayed on your screen. You will have the company name (Google), ticker (GOOGL), open, high, low and close. You will also have volume data, market capitalization, buy and sell data. In this example, we will use the bar chart. The green and red vertical bars wandering across the graph represent the changes in stock price. Each vertical bar represents the highest and lowest prices of the stock. A tall bar means the price was volatile while a short bar indicates price movement was less volatile. If the price was lower at the end of the interval than the beginning, the bar is red. It's green if the stock price went up during that period. At the bottom of the chart, you have the choice of changing the time interval. You can select a shorter or longer duration. If you select a one-day interval, the bar chart will represent the stock price range for the entire trading day. What you need to know is that weekly charts display long term trends while intraday charts display price action within the day. You can have time frames all the way down to less than a minute or even tick charts for really fast price action. What to look for in stock chart software Wondering how any charting software can help you find winning stocks? Charts are the portal to the markets for day traders. Thanks to the many features available with stock charts, traders have access to a lot of market information. When looking for stock chart software, here is what you should consider: Lines - can the stock chart software support vertical, horizontal and trend lines? Lines are important when it comes to analysis. For starters, they help you to identify support and resistant levels. They also help you to recognize trends. Symbols - the best stock chart software should have a good library that enables you to load images as symbols. It should also allow you to mark signals with symbols such as exit long, buy, exit short and sell. Line studies - good software should provide pre-built support for line studies. They include Gann Fans, quadrant lines, Speed lines, Raff Regression, and Trone levels. Different shapes - drawing tools such as shapes, rectangles and ellipses allow you to highlight specific price action. Other factors to consider include easy to use interface, support for technical indicators, support for different chart layouts, color, fonts, and Fibonacci studies. A brief overview of the best free stock charts 1. Tradingview If you value a stock chart software with great technical and fundamental analysis, then we recommend Tradingview. Made for day traders, the software lets you discover investment ideas and learn from the community. Easy and intuitive, no complex setups or installations needed. You can access browser-based charts with real-time data getting you started immediately. Like most stock chart software, Tradingview is free but to access advanced features, you need to upgrade. Tradingview features include: Different chart types Spread charts Advanced price scaling 50+ intelligent drawing tools Multiple chart layouts Server-side alerts Stock screener Supports multiple brokers Customized technical analysis Broad market data coverage Apart from accessing in-depth features, upgrading to Pro(\$12.95/mo), Pro+(\$24.95/mo) or Premium(\$49.95/mo) allows you to enjoy an ad-free experience. You also have access to Tradingview social network where you can learn from community members. 2. Stockcharts.com With Stockcharts.com, not only will you get to see markets more clearly but you will find new opportunities and improve your portfolio management. StockCharts is trusted by millions of day traders and online investors around the world. Why? It creates the highest-quality financial charts in seconds. You can also create bigger and more advanced charts or run custom scans to locate winning stocks. Plus, you can set automatic alerts and receive daily market commentary from industry-leading traders. Try StockCharts for free thanks to the 1-month free trial and if you like how the software works, upgrade to Basic (\$14.95/mo), Extra (\$24.95/month) or Pro(\$39.95/mo). StockCharts has award-winning features such as: Advanced winning chart Real-time intraday data More indicator and overlays Organize charts with ChartLists Intuitive Member's dashboard Advanced technical scanning Custom alerts Expert market commentary With StockCharts, you don't have to download or install any software. You can access everything on a modern browser using your laptop, desktop, tablet or smartphone. 3. FinViz Financial Visualizations is a free stock chart software that has remained unchanged for many years. It has a stock screener which allows you to screen using a variety of technical, descriptive and fundamental metrics. It also provides useful information such as quotes and real-time news. Apart from the stock screener, you have the heat map with S&P 500 index stocks grouped by industries and sectors. If you desire, you can switch from the map to bubbles. FinViz also provides data on futures, forex, and crypto. Although FinViz is a great tool for the advanced day trader, it has a few constraints. For starters, users are constrained to using the drop-down menus with pre-specified ranges. As such, you cannot select or input your values. Second, FinViz does not allow you to export results without signing up to its Elite service (\$24.96/mo). Available features offered to FinViz Elite users include: Real-time quotes Premarket data Advanced visualizations Backtesting Advanced screener Alerts and notifications The good news about FinViz is that it can help you make sound stock-picking decisions. 4. Yahoo! Finance Yahoo! Finance is one of the most popular stock charts. Designed with an intuitive interface, it offers free real-time quotes for NASDAQ listed stocks and the New York Stock Exchange. It also offers free interactive charts together with a selection of more than 100 technical indicators. Traders have the opportunity of creating an unlimited list of stocks to follow. You can even link Yahoo! Finance to your brokerage account. This will allow you to implement trades based on your sound strategies. To access more features, try Yahoo! Finance Premium. A 28-day free trial allows you to test advanced features such as: Exclusive insights and data Advanced charts and tools Intuitive data visualization Advanced portfolio analytics Enhanced charting for technical and event analysis Ad lite experience Live chat on desktop Yahoo! Finance Premium is available at \$34.99/month or \$349.99/year. Bottom Line To become a serious trader, you must first learn how charts work. That means familiarizing yourself with trend lines, technical analysis, support and resistance levels. Learning how to use a stock chart software will also enable you to spot winning stocks and trends.
